

ABSTRACT OF THE DISCLOSURE**SHARING MESSAGING DEVICE INFORMATION AMONG NETWORK USERS**

5 A method, system and program for sharing message device
information among multiple devices participating in network
communications in an electronic system are provided. Device
information for each device utilized by a user to participate in
a messaging system is determined and transmitted to a messaging
10 server. The device information is then filtered according to
authorization preferences. Next, the filtered device information
is distributed to the devices for multiple users participating in
the messaging session, such that each of the multiple users is
enabled to monitor each other device utilized by the other
particular users during the messaging session.
